

VSA Instructor Run Sheet - M365 Copilot End-User Series

Four standalone 60-min live sessions, up to 50 learners. Week 1: Jul 14 (A 2:00, B 4:00), Jul 15 (C 10:00, D 2:00). Week 2 identical repeat: Jul 21-22 (new audience - crescendo resets, jokes reusable).

Delivery decks: Instructor/Session_Decks/ - one per session (A=34, B=29, C=24, D=23 slides; each = title + session + appendix map). Master deck VSA_M365_Copilot_EndUser.pptx (101 slides) is the content source of record. All four beat tables cite SESSION-DECK numbering (each deck: title + session + 2-slide appendix map).

The exclusion contract - never show, never chase

Teams Copilot (recap or chat) / PPT auto-create & speaker-notes generation / Excel Python/automation/advanced analysis / Edge Copilot sidebar / enterprise-grounded "catch me up" chat. Web grounding is off; connectors disabled. Tenant is GCC HIGH. Language rule: say "not yet available on your tenant." TEAMS UPDATE 7/14 (field observation): Teams Copilot IS present in their tenant - docs were stale. Never claim the platform gap. If asked: "it's newer than our materials - it's appearing in your tenant now; this hour focuses on Outlook where the deepest wins are, and ask your IT team about rollout status."

Morning-of verification gate (run BOTH delivery mornings - Jul 14 and Jul 21)

1. Copilot Chat: Settings -> Web search OFF (per demo account - it can reset). Then attach Range_Safety_Policy.docx, run packet prompt #1 -> grounded answer with citations, no web sources.
2. Outlook demo mailbox: Pad B thread present (12 msgs), Summary by Copilot works, Draft + Coaching present. My_Sent_Emails.docx staged; voice-profile prompt returns a specific profile.
3. Word: Draft with file references works on Launch_Campaign_Status.docx; PPT: open Spaceport_Overview.pptx, chat pane answers. Session C day: proposal pack staged (spec + 3 proposals); rubric prompt returns weighted criteria.
4. Excel: Range_Utilization.xlsx opens with RangeOps table intact; formula prompt returns IFERROR variant.
5. OneNote: is Copilot present? If NO -> flip Demo D2 to the Chat fallback (Kickoff_Notes.docx) and say so plainly in session.
- 5b. TEAMS: check Copilot presence/scope in Teams (chat summary? meeting recap?) - it appeared in-tenant 7/14; know what you'd say before someone asks.
6. Handout link ready in a notepad to paste: github.com/scottrhay/vsacopilot (student-only repo - verify it loads in a private browser window).
7. Feature list re-check: 5 min against the GCCH column of the M365 Copilot service description - anything newly available gets a verbal mention, not an improvised demo.

Webinar mechanics (every session)

- SOLO OPERATION (no moderator): batch chat at the built-in pause points - after each demo, at the paste-this slide, and Q&A. Don't try to read chat mid-demo.
- Links you drop yourself (stage both in a notepad before session start): the GitHub repo github.com/scottrhay/vsacopilot (packet, case study, practice files) at the paste-this slide (~min 40), again at close.
- Crescendo: L1 reaction at open -> L2 neutral chat question mid-hour -> L3 short-answer at demos -> L4 = moderated Q&A. Labels are in the speaker notes.
- Repo link = the one handout: packet, Campaign MERIDIAN case study, and practice files all live there.

- Timing discipline: demos have hard stops. If a demo runs long, cut the LAST iterate pass, never the debrief.
- Never attach a file created seconds ago (sync lag burns you live). All demo files staged and opened once before session start.

Session A - Prompting & Copilot Chat (session deck: 34 slides, DENSE hour - hold the beat times)

Min	Slides	Beat
0-4	1-3	Welcome + spaceport Monday scenario, L1 thumbs-up
4-7	4	What Copilot is
7-12	5-6	ORIENT: there's an app (live on screen, L2 found-the-app) / the message box you'll live in
12-14	7	THE ONE IDEA: quality in, vetted out (the session map; L1 sent-without-reading)
14-24	8-12	INPUTS: GCSE / build-up (FIX-IT audience exercise, L3) / iterate verbs / chats stick around (why iterate works) / pick-your-speed
24-30	13-15	SOURCES: grounding four-source (model knowledge = fabrication risk; web off, environment reality VERBAL; + menu screenshot on slide) / how it builds / receipt
30-37	16	DEMO 1 - policy to 5 bullets, ending with THE TWO KEEPS: bookmark the prompt + send answer to a Page (define Pages at the click)
37-43	17-20	PAYOFF TOUR - Gallery (open via ... under the message box; save = bookmark on hover) / Create/My images / Library (open the MERIDIAN brief Page live, L3 where-answers-go) / Agents look-ahead
43-48	21-24	VALIDATION block (callback: this is the VETTED OUT column) - 4 checks / three tells / TRAFFIC LIGHT (L3 what-color) / validation paste-this
48-52	25	DEMO 2 - break it on purpose, then catch it
52-56	26	DEMO 3 - status to leadership brief (Think Deeper candidate; cut the last iterate pass if behind)
56-58	27-30	Packet (link!) / power moves / personas / first-ten / recap (move fast)
58-60	31-32	Recap + L4 Q&A + first-prompt assignment

The story: every session runs inside ONE named fictional arc - **Campaign MERIDIAN** (Skyward Dynamics' first launch from Pad B, window July 28, LRR July 24). Name it at every hook; all demo files are artifacts of it. Learner one-pager: Student/Campaign_MERIDIAN_Case_Study.pdf - drop the link with the packet.

App-tour prep: have the Copilot web app open and signed in BEFORE session start (web search already OFF); tour slides 7-13 are anchors while you drive the live app. Do not click into Agents or Notebooks - point only.

Demo A1 - 48 pages to 5 bullets. Files: Range_Safety_Policy.docx. Click-path: Copilot Chat -> attach -> run level-1 prompt ("Summarize the new safety policy.") -> show generic result -> full GCSE prompt (bold in notes) -> click a citation -> verify section 5.2 -> follow-up on 9.3 staffing. Expected: badge escort 5.2, lightning 7.1, staffing cert 9.3 all surface. Recovery: paste text instead of attach; fallback cards A1-A2.

Demo A2 - break it on purpose. Same chat as A1, policy still attached. Ask about drone operations (not in the doc) -> read the response -> demand the exact quote -> re-ground with 'based ONLY on the attached document'. Either behavior teaches: honest gap = trust the receipts; confident guess = the quote-demand catches it. Cards A5-A6.

Demo A3 - leadership brief. File: Launch_Campaign_Status.docx. GCSE prompt -> re-aim to board -> cut to 3 -> tighten. Expected: risks trace to R-104/R-117/R-121. If it invents a risk: teach the catch live. Cards A3-A4.

Session B - Teams & Outlook (session deck: 29 slides, DENSE hour - hold the beat times)

Min	Slides	Beat
0-4	1-3	Welcome + inbox-avalanche scenario (name Campaign MERIDIAN), L1 unread-count
4-6	4	Inbox statement - Teams expectation VERBAL, one sentence, GCC-High platform fact
6-11	5-6	Outlook three verbs / summarize at three depths
11-19	7	DEMO 1 - triage the Pad B thread (skim -> decisions -> commitments table)
19-25	8-10	Draft dials / grounded replies / coaching
25-27	11	Inbox paste-this - DROP THE REPO LINK
27-29	12	Drafts-it-or-you decision
29-33	13-15	VOICE BLOCK - the promise / the 5-step workflow / what a good profile looks like (L2 rewritten-a-draft)
33-41	16	DEMO 2 - voice profile: build, save to Page, draft with/without
41-44	17-18	Voice paste-this (tonight's assignment) / keep it alive
44-47	19-21	Meetings pivot / around-the-meeting / prep-brief four boxes
47-53	22	DEMO 3 - prepared for the 3:00 (trim agenda step if behind)
53-56	23-25	Meetings paste-this / reply patterns / inbox-week habit (L3 which-habit)
56-60	26-27	Recap + L4 Q&A + voice-profile assignment

Voice-demo prep: My_Sent_Emails.docx staged; expected profile = short sentences, 'Team - ' greeting, 'Thanks much - S' sign-off, deadline up front, never 'per'/'utilize'/'I hope this finds you well.'

Demo B1 - thread triage. SEEDED AND VERIFIED 7/14 in the GCC mailbox: open the email "FW: Pad B Schedule Conflict - wet dress vs maintenance (full thread)" (top of inbox, 10:28 AM) - the full 12-message chain is in its body, and Summary by Copilot verifies clean (catches all 3 options + the ownerless range-booking item). The 12 individual alias emails in the inbox are set dressing. Voice demo bonus: the 8 voice emails are ALSO in GCC Sent Items (10:31-10:32) - show Sent Items as the 'collect' step before attaching My_Sent_Emails.docx. Click-path: open thread -> Summary by Copilot (skim) -> commitments-table prompt in the pane (money moment: the unowned range-booking re-file) -> Draft with Copilot (confirm/commit/ask) -> Coaching pass -> hand-edit one line. Recovery: paste thread text into Chat. Cards B1-B3.

Demo B2 - voice profile. File: My_Sent_Emails.docx in Chat. Analyze-style prompt (bold in notes) -> read profile aloud -> refine one line -> save to Page "My Voice" -> draft the vendor-decline reply generic, then with the profile, read both aloud. Recovery: 'What are the 3 most distinctive patterns in these emails?' and rebuild. Cards B4-B5.

Demo B3 - meeting prep. Files: Tenant_Use_Agreement.docx + Launch_Campaign_Status.docx in Chat -> prep brief -> timed agenda -> Outlook drafts agenda email. Expected: insurance cert, range fees, integration timeline clauses surface. Recovery: run all three steps in Chat. Cards B6-B7.

Session C - PowerPoint & Word (session deck: 24 slides, three demos - hold the beats)

Min	Slides	Beat
0-4	1-3	Welcome + Friday-brief scenario (name Campaign MERIDIAN + the Pad B vendor decision), L1 copy-paste thumbs

Min	Slides	Beat
4-9	4-5	Daily four (NOs verbal) / point-at-sources staging (L2 where-files-live)
9-18	6	DEMO 1 - readiness brief in Word (grounded-vs-not contrast is the lesson)
18-22	7-9	Word paste-this (DROP REPO LINK) / contract interrogation patterns / Word-vs-Chat decision
22-26	10-11	Judgment statement / rubric-first workflow (L2 vendor-pick-questioned)
26-36	12	DEMO 2 - proposal evaluation (the flagship; CoastalFlow wins, steelman AquaSystems)
36-40	13-14	Evaluate-everything paste-this / where rubric-first works
40-42	15-16	PPT statement pivot / PPT strengths
42-48	17	DEMO 3 - inherit the deck (slides 8 & 16 are the walls-of-words)
48-52	18-21	PPT paste-this / document loop / document week (L3 weakest-node)
52-60	22	Recap + L4 Q&A + feedback micro-ask

Demo C1 - readiness brief. Files: Launch_Campaign_Status.docx + Tenant_Use_Agreement.docx staged in OneDrive. Grounded draft -> ungrounded contrast -> board rewrite -> weakest-section. Cards C1-C3.

Demo C2 - proposal evaluation (flagship). Files: Deluge_Inspection_Spec.docx + Proposal_AquaSystems/CoastalFlow/TriState.docx. Rubric from spec (adjust one weight live) -> score all three w/ citations -> steelman the weakest -> memo with Dissent Considered. Answer key: Proposal_Evaluation_ANSWERS.md (CoastalFlow wins; AquaSystems busts the 2-day window; TriState busts the cap). If scoring drifts: 'score ONLY from the proposal text; cite the section per score.' Cards C4-C6.

Demo C3 - inherit a deck. Spaceport_Overview.pptx; summarize -> tighten slide 8 -> navigate. Cards C7-C8.

Session D - OneNote & Excel (session deck: 23 slides, series close)

Min	Slides	Beat
0-4	1-3	Welcome + numbers-and-notes scenario (MERIDIAN: same kickoff, same schedule), L1 googled-formula
4-9	4-5	Formula coach (expectations verbal) / named-tables 10-second setup (L2 tables-poll)
9-18	6	DEMO 1 - formulas from English (variance -> explain the monster -> what-if column)
18-24	7-9	Verify-the-math 30-second checks / MERIDIAN what-ifs / Excel paste-this (DROP REPO LINK)
24-26	10	Excel-vs-Chat decision
26-29	11-13	Notes statement / refinery / capture-refine-share loop (L2 where-notes-live)
29-37	14	DEMO 2 - kickoff notes to actions (ownerless insurance cert = 3-session payoff)
37-42	15-17	Notes paste-this / notes pipeline across apps / 4:30 status-call kit (story payoff)
42-47	18-19	Prompt library habit / first-week flow (L3 which-day)
47-60	20-21	Series recap / commitments in chat + L4 Q&A + close

Demo D1 - formula coach. Range_Utilization.xlsx (RangeOps table). Variance -> explain Notes!B4 -> what-if ONE column. Answer key: Range_Utilization_ANSWERS.md. Debug loop = teaching. Cards D1-D3.

Demo D2 - notes to actions. OneNote page from Kickoff_Notes.docx (Chat fallback decided at morning gate). Extract w/ flag column -> status bullets -> minutes. Cards D4-D5.

Baked-cake fallback cards

Capture screenshots A1-A6, B1-B7, C1-C5, D1-D5 during your dry run (each demo's expected output at its money moment). Store in Instructor/Fallback_Cards/. If live fails twice, show the card, narrate, move on - never debug in front of 50 people.

Likely questions bank

- "Why doesn't my Copilot look like the videos?" -> GCC High runs behind commercial; not you.
- "Is my data training the model?" -> No. Enterprise data protection; prompts and files stay in the tenant.
- "When do we get [auto-decks / Python]?" -> newer features reach GCC High on a delay - watch with your IT team; your prompting skills transfer the day they land. TEAMS: it's already appearing in your tenant (7/14 observation) - don't claim it's absent; defer depth to IT rollout guidance.
- "Can I put [sensitive/regulated] in a prompt?" -> follow your data handling policy; nothing classified or regulated without authorization.
- "Where should files live?" -> OneDrive/SharePoint - that's what makes referencing work.

Positive-framing rule (Scott, 2026-07-08)

Slides project only what learners CAN do. Every limitation is delivered verbally (scripted in speaker notes) and lives once in the appendix map (slides 49-50). If you add a slide, no "can't/not available" bullets on the projected surface.

Demoing from a GCC tenant for a GCCH audience (added 2026-07-13)

Your demo tenant is GCC; students are on GCC High. The columns match for everything scripted in this run sheet - follow the demo click-paths exactly and you cannot show a GCCH-unavailable feature. Three GCC-only traps to avoid:

1. **Never open Teams.** Teams Copilot works in GCC but not GCCH. Zero Teams screen time.
2. **Never open Copilot inside SharePoint** (site chat/agents - GCC yes, GCCH no). Referencing files stored in SharePoint/OneDrive is fine and is what the demos use.
3. **Kill web search in Chat.** Copilot Chat -> Settings (top-right ...) -> "Copilot response includes: Web search" -> OFF, on EVERY demo account (per-user setting). Then stay in Work mode. GCCH default is web-off; this makes your responses and citations match what students can reproduce.

If UI chrome differs from what students see: "your tenant may render this slightly differently - same prompt, same skill." Do not improvise beyond the scripted prompts; anything unscripted risks a GCC-only feature appearing.
