

VIRGINIA SPACEPORT AUTHORITY · LIVE TRAINING

Microsoft 365 Copilot at Work

Making Copilot work for you.

Scott Hay · Microsoft Certified Trainer · AIA Copilot

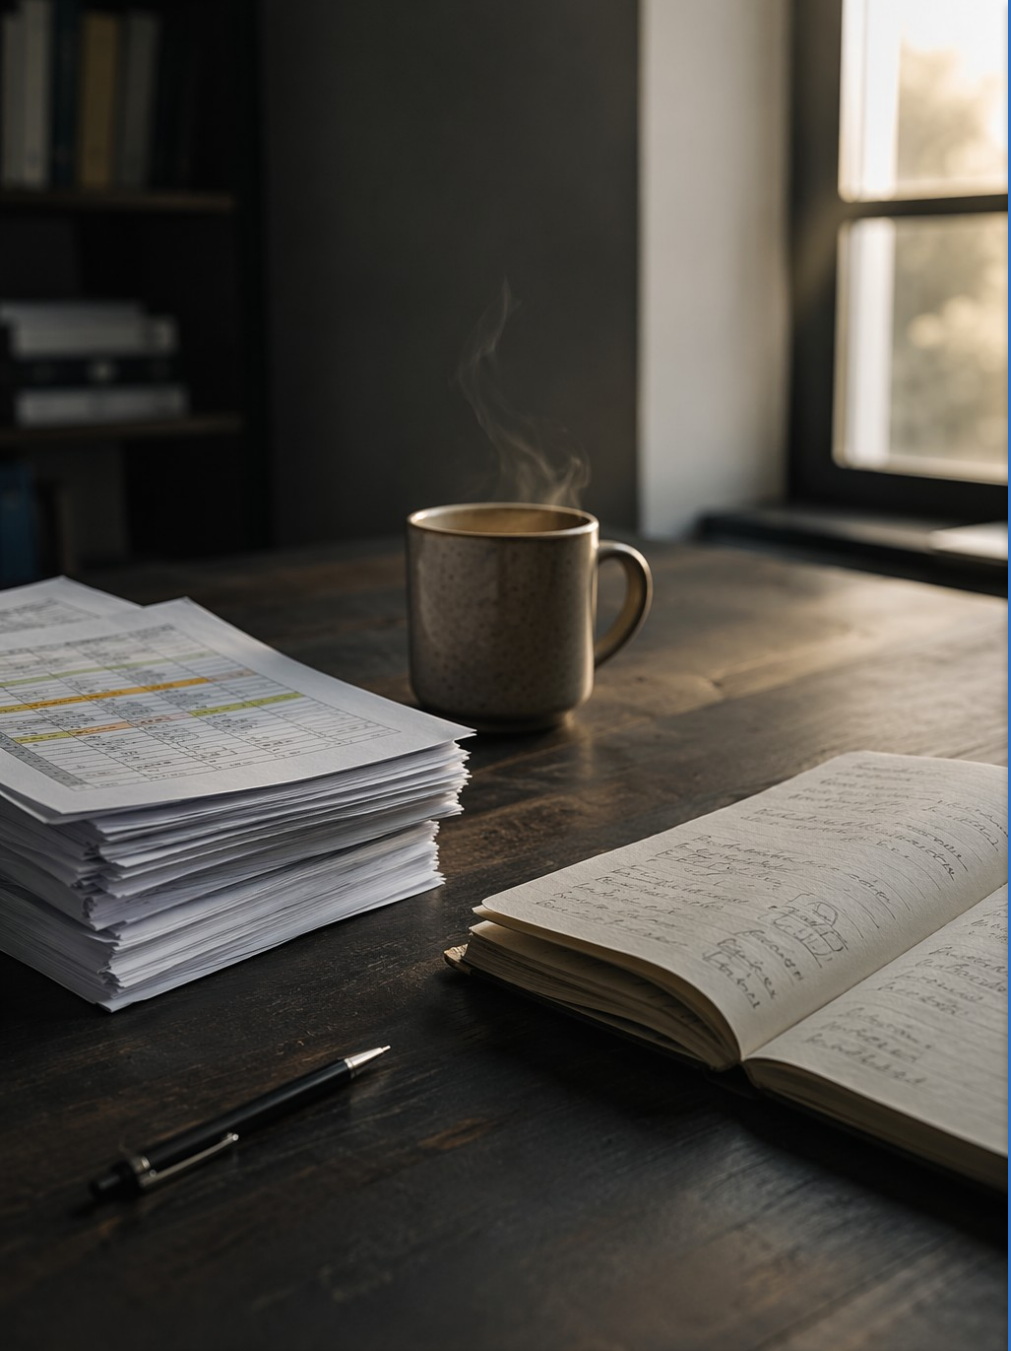

SESSION D · 60 MINUTES

Copilot in OneNote & Excel

Formulas on demand. Notes into actions.

SESSION D · THE SCENARIO

Numbers and notes, same afternoon

Campaign MERIDIAN's range schedule needs math. The kickoff notes need owners.

Range utilization workbook - leadership wants variance, you want formulas

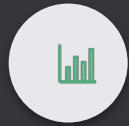

Two pages of raw notes - from the Skyward kickoff

Both due today - before the 4:30 status call

Excel Copilot - your formula coach

Formulas from English

Describe the calculation - get the working formula to paste.

Explains anything

Inherited a monster formula? Get it in plain language.

Debugs with you

Paste the error back and say 'fix it' - iterate to working.

Frames what-ifs

Describe the scenario; it suggests the columns and formulas.

Named tables - the 10-second setup

Make it a table

Select your data → Insert → Table. Ten seconds.

Name it

Table Design → rename to something real: RangeOps, not Table1.

Why it matters

Copilot reasons over named structure far better than raw cells.

This one habit doubles the quality of every Excel answer you'll get.

Formulas from plain English

LIVE DEMO

- 1** Open Range_Utilization.xlsx - RangeOps table
- 2** Ask for the variance formula - paste it
- 3** 'Explain this formula like I'm not an Excel person'
- 4** What-if framing: 'how would I model +2 launches?'

Verify the math - 30 seconds

Test a known row

Pick one row you can compute mentally - does the formula agree?

Sanity the scale

Percentages over 100?
Negatives where none belong? Stop and ask.

Make it explain

'Walk me through this formula on row 7' - the explanation exposes bad logic.

Session A's traffic light applies to formulas too: green paste, yellow adjust, red re-ask.

Scenarios the campaign actually asks

Volume

'Two extra launches per month - what does utilization look like?'

Price

'Range fee up 8% next fiscal year - revenue impact by pad?'

Downtime

'Pad B offline two weeks for inspection - which bookings collide?'

Paste these into Excel

What you're practicing

- Named tables before formulas
- Ask, paste, verify a known row
- Debug by pasting the error back
- What-ifs framed, then owned

PASTE THIS

“

Write a formula for [calculation] using the [TableName] table. Handle [edge case].

“

Explain this formula like I'm not an Excel person: [paste formula]

“

I want to model [scenario]. What columns and formulas should I add?

In Excel - or in Chat?

Copilot in Excel

- Formulas on the live table
- Explaining what's in front of you
- Column-level what-ifs

Copilot Chat

- Cross-file number questions
- Upload a workbook, ask anything
- Narrative from the numbers

In-app for the cells, Chat for the story the numbers tell.

SESSION D · ONENOTE

Nothing falls through the cracks

OneNote Copilot - the note refinery

Extract actions

Raw notes in - owners, actions, deadlines out.

Summarize pages

A semester of project notes into one status view.

Rewrite for sharing

Your shorthand becomes minutes you can send.

Same prompts work in Copilot Chat too - attach or paste your notes.

Capture, refine, share

01

Capture

Messy is fine - just get it down.

02

Refine

Actions table; flag missing owners.

03

Share

Minutes out via Outlook - Session B's move.

Kickoff notes into an action list

LIVE DEMO

- 1** Open the tenant-kickoff notes page
- 2** Extract: actions, owners, deadlines - as a table
- 3** Summarize for the 4:30 status call
- 4** Rewrite as minutes to send the tenant

Paste these - notes to accountability

What you're practicing

- Capture messy, refine once
- Actions with owners - always
- Flag the ownerless items
- Minutes out the same day

PASTE THIS

“

Extract every action item from these notes as a table: action, owner, deadline. Flag anything with no owner.

“

Summarize these notes in 5 bullets for a status call - decisions first.

“

Rewrite these notes as professional meeting minutes I can send to [who].

Notes flow through your apps

OneNote captures

Messy in-meeting notes - speed over beauty.

Copilot refines

Actions table, status summary, sendable minutes.

Outlook delivers

Minutes out same-day - Session B's follow-up move.

Word absorbs

Decisions land in the readiness brief - Session C's draft.

The 4:30 status call kit

The variance column

Built in demo one - the number leadership asks about first.

The five bullets

Decisions-first summary from the kickoff notes.

The action table

Owners and deadlines - including the flagged insurance cert.

Forty minutes of Copilot work; you walk into the 4:30 as the most prepared person in the room.

Build your prompt library

One Page: 'My prompts'

Every prompt that worked goes in - yours, the packet's, your teammates'.

Share the winners

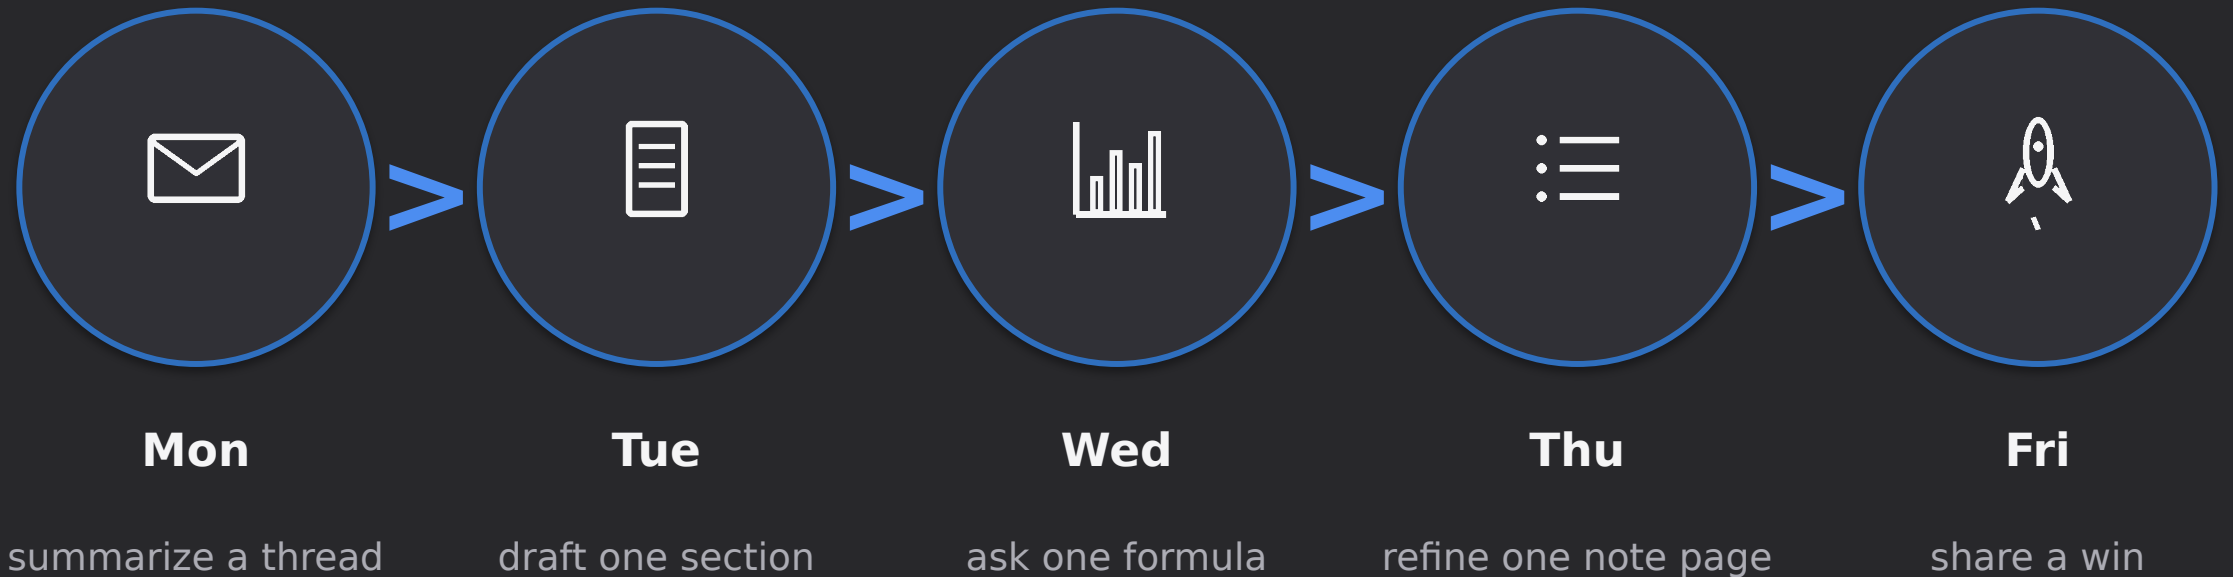

A team prompt page turns one person's discovery into everyone's speed.

Prune monthly

Keep the ten you actually use; retire the rest.

Your first week with Copilot

The series in three lines

“

Attach the file - grounding
beats guessing.

“

GCSE every prompt;
iterate, then verify.

“

Use what's here today -
skills transfer when more
arrives.

Questions - and one commitment

Your commitment

Type in chat the ONE prompt from the packet you'll run before 5 PM today. Public commitments stick.

Keep going

Prompt packet, case study, practice files:
github.com/scottrhay/vsacopilot. Your IT team knows what's coming next.

APPENDIX

Your environment reference

The availability map - July 2026.

Use today - and what's next

USE TODAY	NOT YET AVAILABLE HERE
Chat with attached files	Enterprise-wide chat grounding
Word: grounded drafts, rewrites	PPT auto-create, speaker notes
PPT & Word: summarize, tighten	Teams: recap and chat Copilot
Outlook: summarize, draft, coach	Outlook: Schedule with Copilot
Excel: formulas, explain, what-if	Excel: Python and automation
OneNote: summaries, actions	Edge sidebar; web grounding
